- **RELIABLE**
- **EASY TO USE**
- **VORTECH® WATER FLOW TECHNOLOGY**
- **SPARKLING, ACID FREE WATER FROM
ANY FAUCET IN YOUR HOME**
- **PROTECT YOUR PLUMBING FIXTURES
AND WATER USING APPLIANCES WITH
THIS WATER SAVING UNIT**

Quality That Lasts!

224 Shoemaker Road • Pottstown, Pennsylvania 19464

CAUTION: The Upflow Series Acid neutralizers are designed to be used on clear water applications only (less than 5 NTU Turbidity and .5 ppm Iron). Failure to do so could result in a pressure loss, cloudy water and possibly void the warranty.

**THE WORLD'S
NEWEST WATER
FLOW TECHNOLOGY.**

The Vortech distributor provides even water flow to maximize the unit's efficiency to treat water. Higher flows, less pressure loss – more gallons treated.

FEATURES:

These units allow the low pH water (6.8 or less) to travel upflow through a neutralizing mineral without the need for backwashing.

Uses a state of the art bottom Inlet/top Outlet valve made of durable Noryl. This valve is engineered and designed to handle high flow rates, which means less water pressure and flow loss at your plumbing fixtures.

All components are constructed of high quality non corrosive materials.

Each unit is equipped with a special upper distributor system to prevent the loss of neutralizing mineral during service.

FEATURES:

Great for situations where small amounts of water prevents the use of a backwashing neutralizer.

****Detailed warranty information accompanies each water conditioner.**
